You also have the power to recharge your car battery if you forget and leave the radio playing, or you leave a light on. Check Latest PriceInstructions for using the Stanley family of jump starters: Using a Stanley jump starter is very easy. These devices are automatic so one they are connected to the dead battery they know what to do and how to do it. When you first bring your Stanley jump starter home you are going to need to plug it into an electrical outlet and let it charge for twelve continuous hours before you can use the device. This allows the internal battery to receive a full charge. Not following this charging step can reduce the number of amp hours the device can provide between charges. The following steps should be followed when connecting jump starters. Place the vehicle Find the battery that has terminals and posts on the top of the battery, and some batteries have terminals on the side of the battery. You may have to remove a plastic cover that is over the battery posts. These covers are to protect the post from corrosion so you want to replace them after you crank your engine. Check to see which battery terminal is positive and which terminal is negative. There should be a plus or minus sign close to the post to indicate plus for positive and minus for negative. Get your jump starter out of your trunk and make sure the jump starter to the positive terminal on the battery. Connect the alligator clip on the negative cable of the jump starter to the negative terminal of your battery. Wiggle the alligator clips slightly as you connect them to make sure they are making a good connection with the battery post. Turn the jump starter to be provide the dead battery with a surge of power. Crank your engine by turning the ignition key. Once the car cranks disconnect the jump starter by turning off the power to the starter, then disconnect the jump starter by turning off the power to the starter. a light on that could drain your battery then you are advised to go to a mechanic shop and have someone test your car battery to see why it went dead on you. Recharging a Stanley Jump Starter Can easily be brought back to a full charge by plugging the unit into a standard electrical outlet at your home. It is recommended that if you seldom use the system that you recharge about once every thirty days. The jump starter will have an LED indicator light that will glow green when the unit has a full charge and is ready to go. Operation Manuals Operation Manuals are provided with each of the Stanley jump starters. If you should lose your manual you can find detailed manuals online at only real difference in the operation of the Stanley family of jump starters is in the special features that these devices have. Some of the jump starters can also be used to inflate tires, or to charge electronic devices like cell phones, tablets, and personal laptops. Works great rt out the box! Already had some charge it overnight as only took a few hrs for lights to turn green. Used tire inflator also. Awesome extra! This one came w the ac cord too. Used jump box several times till got car to mechanic, needed starter. Keep in trunk for emergencies now. Would buy again!Helpful?This jump starter is a must have for every household, even if you don't have a car, but you have family/friends over, and they ever need a jump it will save you big bucks from calling and waiting on assistance. If you have a vehicle, it is a must have, it has the compressor for the battery and the compressor for know when you might need it, also the tires in cold weather decide to get low pressure, you should always keep your tires, at recommended air pressure levels. Great product and great to have. Thanks. Helpful?Two Christmas's ago, I bought this for my Father in law and he has used it so much and says it is the best gift anyone has bought him, :) Decided to buy my husband one as well and he was so excited. Its awesome that you can not only use it to jump your car, it has a flash light, air pump, and a place for you to charge your phone. There may even be more to it but I haven't looked into it that much since I bought it for the guys :)Helpful?April 18, 2020I like the booster but I did not get a charger. If it was like the 1000w I could just use an extension cord but it uses a 1/4" round 12v plug which means I need an adapter. I can not recommend a product that does not provide a way to charge it and says any 110v cord will work. A minor point is a screw on type air fitting instead of the lever style. Very disappointing. Helpful? Hey Henry! We appreciate your feedback. We're sorry to hear of your less than satisfactory experience with our product, and we deeply regret any inconvenience it may have caused you. We take pride in the reputation we've built with our outstanding products, and that means your satisfaction comes first. Please give us a call at 1.877.571.2391 or e-mail Customer O&AGet specific details about this product from customers who own it. Should I charge it for 24 hours or 6 hours? by GNovember 26, 20144 Answers1. Dear G, You must charge the device on AC method for 24 hours. Maximum charge time on DC method is 6 hours, the 3 indicators lights were solid, I unplugged it, and pressed the battery status button, and all 3 lights came on meaning it was fully charged so I am going by the solid. that.Helpful?3. Charge 24 hours when you buy it. Then do not charge the unit for more than 6 hours.Helpful?4. Why have you bought this item, it says above Warning: it's cancerous .Helpful?4.
