The Java of the game edition allows players to modify the game with MODS to create new game mechanics, elements, textures and assets. In September 2014, Microsoft announced an agreement to buy Mojang and Minecraft's intellectual property for US \$ 2.5 billion, with the acquisition two months after. Minecraft received critical praise and gained numerous awards, and has been described as one of the best and most largest. video games in history. Social networks, parodies, adaptations, merchandise and Minecon's conviction played large roles in the popularization of the game. It has also been used in educational environments, especially in the information of the informal systems, since virtual computers and hardware devices have been built on it. It is the most important video game of all time, which sells more than 176 million copies on all platforms at the end of 2019, while it has more than 112 million monthly active players. Various Spin-off games, such as Minecraft: Story Mode, Minecraft Earth and Minecraft Dungeons have also developed. Minecraft is a 3D sand cash game that has no specific objectives to achieve, allowing players for a large amount of freedom to choose how much to play the game. However, there is a system of achievements. The game is in the first person perspective by default, but the players have the third -person perspective option. The world of the game is composed of 3D objects, mainly cubes and fluids, and commonly called "blocks", which represent various materials, such as dirt, minerals, tree trunks, water and lava. The central game revolves around collecting and placing these objects. These blocks are organized in a 3D grid, while players can move freely around the world. Players canBlocks and then place them elsewhere, allowing them to build things. The world of the game is virtually infinite and is generated procedurally as players explore it, using a map seed obtained from the system clock at the time of world creation (or manually specified by the player). There are lys in the vertical movement, but Minecraft allows us to generate an infinitely large world in the horizontal plane. Due to the technical problems when very distant places are achieved, however, there is a barrier that prevents players from crossing more than 30,000,000 blocks from the center. Small sections called "cunk" that are created or loaded when players are close. The world is divided into biomes ranging from deserts to jungles to snow fields; The land includes plains, mountains, forests, caves and various lava/water bodies. The time system in the game follows a day and night cycle, and a complete cycle lasts 20 minutes in real time. The new players have a predetermined fiery skin randomly selected from Steve or Alex, but the option to create personalized skin and hostile creatures. Passive mobs, such as cows, pigs and chickens, can be hunted for food and artisanal materials. They inhabited in the day, while the hostile mobs á ĉ "including large aramon, skeletons and zombiesá ĉ" were dispatched during the night or in dark places like caves. Some hostile mobs, such as zombies, skeletons and drowned (see underwater versions of zombies), burn under the sun if they have no head. Other the unique creatures of Minecraft include the spooky (an explosive creature that appears to the and the enderman (a creature with the ability to teleport, collect and place blocks). There are also variants of mafia that were wasted in different conditions; for example,They have varying variants that woke up in deserts. Many commentators have described the game's physical system as unrealistic. The lychides flow continuously by a limited horizontal distance of the blocks of origin, which can be removed by placing a sysa block in place or nailing it into a cube. Complex systems can be built using primitive meconic devices, eligic circuits and libic doors built with a material in the game known as Redstone. Minecraft has two alternative dimensions in addition to the entire world (the main world); the Nether and the end. The nether is an infernal dimension accessed through portals built by players; It contains many unique resources and can be used to travel great distances in the world. The player can build an optional boss mafia called the Wither of the materials found in the Nether. The end is a land is composed of many islands. A chief dragon called Ender's drag inhabits on the main island. Killing the Dragon realizes the final chance of the game and a poem written by the Irish novelist, Julian Gough. Then, players are allowed to teleport again to their original spawning point throughout the world and continue the game indefinitely. The game consists of five game modes: survival, creative, adventure, hardcore and spectator. It also has a four -level changing difficulty system. For example, the peaceful difficulty prevents hostile creatures from fading, and the difficult difficulty allows players to starve if their hunger bar is exhausted. Survival mode in survival mode, players have to gather natural resources such as wood and stone found in the environment to develop certain blocks and articles. Depending on the difficulty, the monsters in more dark areas outside a certain radio of the character, requiring players to build a shelter at night. The mode also has a health bar that is exhausted by monster attacks, caādas, drowning, falling in lava, suffocation, hunger and other events. Players players have a hunger bar, which must be periodically refilled by eating food in-game, except in peaceful difficulty. If the hunger bar is depleted, automatic healing will stop and eventually health will deplete. Health replenishes when players have a nearly full hunger bar or continuously on peaceful difficulty.Players can craft a wide variety of items in Minecraft. Craftable items include armor, which mitigates damage from attacks; weapons (such as swords), which allows monsters and animals to be killed more easily; and tools, which break certain types of blocks more quickly. Some items have multiple tiers depending on the material used to craft them, with higher-tier items being more effective and durable. Players can construct furnaces, which can cook food, process ores, and convert materials into other materials. Players may also trade goods with villager NPCs through a bartering system, which involves trading emeralds for different goods and vice versa. The game has an inventory system, allowing players to carry a limited number of items. Upon dying, items in the players' inventories are dropped, and players re-spawn at their spawn point, which by default is where players first spawn in the game, and can be reset by sleeping in a bed. Dropped items can be recovered if players can reach them before they despawn after 5 minutes. Players may acquire experience points by killing mobs and other players, mining, smelting ores, breeding animals, and cooking food. Experience can then be spent on enchanting tools, armor and weapons. Enchanted items are generally more powerful, last longer, or have other special effects.Hardcore mode is a survival mode variant that is locked to the hardest setting and has permadeath, which permanently deletes the world if the player dies. If a player dies on a multiplayer server set to hardcore, they are put into spectator mode.Creative modeIn creative mode, players have access to all resources Articles in the game through the inventory Men, and can place or eliminate them instantly. Players can change the ability to fly freely around the world of the game at will, and their characters do not take any damage and are not affected by hunger. The game mode helps players to focus on the construction and creation of projects of any size without disturbance. Adventure mode The adventure mode was specifically designed so that players could experience personalized maps and adventures for use. Gameplay is similar to the mode of survival but with several restrictions, which can be applied to the world of the game by the creator of the map. This forces players to obtain the necessary items and experience adventures in the way that the maps manufacturer intends. Another addition designed for custom maps is the command block; This block allows maps creators to expand interactions with players through Scripted server commands. Spectator's mode monitor mode allows players to fly through blocks and see the game without interacting directly. Players do not have an inventory, but they can teleport to other players and see from the perspective of another player or creature. This game mode can be accessed within the Java or PC edition. Edition.
